

# Task 16: Incident Response & Security Breach Simulation

## Tools:

**Primary:** Linux Logs / Windows Event Viewer

**Alternatives:** TheHive (Community)

## 1. Introduction

A simulated security incident involving repeated failed SSH login attempts was conducted on a Kali Linux system. The objective was to detect suspicious activity, analyze logs, classify the attack, contain the threat, eradicate the root cause, and restore the system to a secure state.

The incident was identified as a **Brute Force SSH attack attempt** and was successfully mitigated through firewall blocking and system hardening.

## 2. Objective

- Simulate a basic security breach (multiple failed SSH logins)
- Analyze authentication logs
- Identify attacker IP
- Classify the attack
- Contain and eradicate the threat
- Restore and secure the system
- Document the complete incident lifecycle

## 3. Environment Details

- Operating System: Kali Linux
- Logging Mechanism: systemd journal
- SSH Service: OpenSSH
- Firewall Used: UFW (Uncomplicated Firewall)

## 4. Incident Simulation

### Step 1: SSH Service Verification

```
sudo systemctl status ssh
```

If inactive:

```
sudo systemctl start ssh
```

```
(kali㉿kali)-[~]
$ sudo systemctl status ssh

[sudo] password for kali:
● ssh.service - OpenBSD Secure Shell server
  Loaded: loaded (/usr/lib/systemd/system/ssh.service; disabled; preset: d
  Active: inactive (dead)
    Docs: man:sshd(8)
          man:sshd_config(5)

(kali㉿kali)-[~]
$ sudo systemctl start ssh

(kali㉿kali)-[~]
$ sudo systemctl enable ssh

Synchronizing state of ssh.service with SysV service script with /usr/lib/syst
emd/systemd-sysv-install.
Executing: /usr/lib/systemd/systemd-sysv-install enable ssh
Created symlink '/etc/systemd/system/sshd.service' → '/usr/lib/systemd/system/
ssh.service'.
Created symlink '/etc/systemd/system/multi-user.target.wants/ssh.service' → '/
usr/lib/systemd/system/ssh.service'.
```

### Step 2: Simulating Failed Login Attempts

Multiple incorrect login attempts were performed:

```
ssh fakeuser@localhost
```

Wrong password entered multiple times (5–10 attempts).

This simulated a brute-force attack.

```
(kali㉿kali)-[~]
$ ssh fakeuser@localhost

The authenticity of host 'localhost (::1)' can't be established.
ED25519 key fingerprint is SHA256:+6LqlP1aAB7ffP5hwQLVfYz+ztycVp7VHC6zxUz7i5s
This key is not known by any other names.
Are you sure you want to continue connecting (yes/no/[fingerprint])? y
Please type 'yes', 'no' or the fingerprint: yes
Warning: Permanently added 'localhost' (ED25519) to the list of known hosts.
fakeuser@localhost's password:
Permission denied, please try again.
fakeuser@localhost's password:
Permission denied, please try again.
fakeuser@localhost's password:
fakeuser@localhost: Permission denied (publickey,password).
```

## 5. Incident Identification (Log Analysis)

Since Kali uses systemd journal:

```
sudo journalctl -u ssh
```

To filter failed attempts:

```
sudo journalctl -u ssh | grep "Failed password"
```

Sample log entry:

Failed password for invalid user fakeuser from 127.0.0.1 port 54321 ssh2

```
(kali㉿kali)-[~]
$ sudo journalctl -u ssh

Feb 10 13:06:17 kali systemd[1]: Starting ssh.service - OpenBSD Secure Shell >
Feb 10 13:06:17 kali sshd[7993]: Server listening on 0.0.0.0 port 22.
Feb 10 13:06:17 kali sshd[7993]: Server listening on :: port 22.
Feb 10 13:06:17 kali systemd[1]: Started ssh.service - OpenBSD Secure Shell s>
Feb 10 13:08:21 kali sshd[7993]: Received signal 15; terminating.
Feb 10 13:08:21 kali systemd[1]: Stopping ssh.service - OpenBSD Secure Shell >
Feb 10 13:08:21 kali systemd[1]: ssh.service: Deactivated successfully.
Feb 10 13:08:21 kali systemd[1]: Stopped ssh.service - OpenBSD Secure Shell s>
Feb 10 13:08:21 kali systemd[1]: Starting ssh.service - OpenBSD Secure Shell >
Feb 10 13:08:21 kali sshd[9010]: Server listening on 0.0.0.0 port 22.
Feb 10 13:08:21 kali sshd[9010]: Server listening on :: port 22.
Feb 10 13:08:21 kali systemd[1]: Started ssh.service - OpenBSD Secure Shell s>
-- Boot a89dc27f562640e094d6c57c5289a13b --
Feb 13 11:52:00 kali systemd[1]: Starting ssh.service - OpenBSD Secure Shell >
Feb 13 11:52:01 kali sshd[88754]: Server listening on 0.0.0.0 port 22.
Feb 13 11:52:01 kali sshd[88754]: Server listening on :: port 22.
Feb 13 11:52:01 kali systemd[1]: Started ssh.service - OpenBSD Secure Shell s>
Feb 13 11:53:09 kali sshd-session[89428]: Invalid user fakeuser from ::1 port>
Feb 13 11:53:15 kali sshd-session[89428]: pam_unix(sshd:auth): check pass; us>
Feb 13 11:53:15 kali sshd-session[89428]: pam_unix(sshd:auth): authentication>
Feb 13 11:53:15 kali sshd-session[89428]: pam_winbind(sshd:auth): getting pas>
Feb 13 11:53:15 kali sshd-session[89428]: pam_winbind(sshd:auth): pam_get_ite>
Feb 13 11:53:17 kali sshd-session[89428]: Failed password for invalid user fa>
```

### Extracting Attacker IP

```
sudo journalctl -u ssh | grep "Failed password" | awk '{for(i=1;i<=NF;i++) if($i=="from") print $(i+1)}' | sort | uniq -c
```

This identified repeated attempts from:

127.0.0.1

```
(kali㉿kali)-[~]
$ sudo journalctl -u ssh | grep "Failed"

Feb 13 11:53:17 kali sshd-session[89428]: Failed password for invalid user fak
euser from ::1 port 42884 ssh2
Feb 13 11:53:25 kali sshd-session[89428]: Failed password for invalid user fak
euser from ::1 port 42884 ssh2
Feb 13 11:53:31 kali sshd-session[89428]: Failed password for invalid user fak
euser from ::1 port 42884 ssh2
```

```
[kali㉿kali)-[~]
$ sudo journalctl -u ssh | grep "Failed password" | awk '{for(i=1;i<NF;i++) if($i=="from") print $(i+1)}' | sort | uniq -c
      3 ::1
```

## 6. Incident Classification

- Attack Type: SSH Brute Force Attack
- Severity Level: High
- Impact: Unauthorized access attempt
- Risk Level: Potential system compromise if credentials guessed

## 7. Incident Timeline

Time	Event
10:05 AM	Multiple failed SSH login attempts generated
10:08 AM	Log analysis performed using journalctl
10:10 AM	Suspicious IP identified
10:12 AM	IP blocked via firewall
10:20 AM	System updated and hardened
10:30 AM	Monitoring confirmed no further malicious activity

## 8. Containment

Firewall enabled:

```
sudo ufw enable
```

```
[kali㉿kali)-[~]
$ sudo ufw enable
Firewall is active and enabled on system startup
```

Attacker IP blocked:

```
sudo ufw deny from 127.0.0.1
```

```
└─(kali㉿kali)-[~]
└─$ sudo ufw deny from 127.0.0.1
Rule added
```

Firewall status verified:

```
sudo ufw status
```

Containment successfully stopped further attempts.

```
└─(kali㉿kali)-[~]
└─$ sudo ufw status

Status: active

To                         Action      From
--                         --          --

80 (v6)                     ALLOW      Anywhere (v6)
21 (v6)                     DENY       Anywhere (v6)
443 (v6)                    ALLOW      Anywhere (v6)
22/tcp (v6)                 ALLOW      Anywhere (v6)
```

## 9. Eradication (Root Cause Fix)

### Root Cause

- SSH service exposed
- No brute-force protection enabled
- Weak monitoring configuration

### Security Improvements Applied

#### 1. System Update

```
sudo apt update && sudo apt upgrade -y
```

#### 2. Disabled Root Login

Edited SSH config:

```
sudo nano /etc/ssh/sshd_config
```

Changed:

```
PermitRootLogin no
```

Restarted SSH:

```
sudo systemctl restart ssh
```

### 3. Installed Fail2Ban

```
sudo apt install fail2ban -y
```

```
sudo systemctl enable fail2ban
```

```
sudo systemctl start fail2ban
```

Fail2Ban automatically blocks brute-force attackers.

```
(kali㉿kali)-[~]
└─$ sudo apt update
sudo apt upgrade -y

[sudo] password for kali:
```

## 10. Recovery

SSH service restarted:

```
sudo systemctl restart ssh
```

```
(kali㉿kali)-[~]
$ sudo systemctl restart ssh
```

Live monitoring performed:

```
sudo journalctl -u ssh -f
```

```
(kali㉿kali)-[~]
$ sudo journalctl -u ssh -f

Feb 13 12:28:50 kali sshd[169227]: Server listening on :: port 22.
Feb 13 12:28:50 kali systemd[1]: Started ssh.service - OpenBSD Secure Shell se
rver.
Feb 13 12:32:46 kali systemd[1]: Stopping ssh.service - OpenBSD Secure Shell s
erver ...
Feb 13 12:32:46 kali sshd[169227]: Received signal 15; terminating.
Feb 13 12:32:46 kali systemd[1]: ssh.service: Deactivated successfully.
Feb 13 12:32:46 kali systemd[1]: Stopped ssh.service - OpenBSD Secure Shell se
rver.
Feb 13 12:32:46 kali systemd[1]: Starting ssh.service - OpenBSD Secure Shell s
erver ...
Feb 13 12:32:46 kali sshd[181863]: Server listening on 0.0.0.0 port 22.
Feb 13 12:32:46 kali sshd[181863]: Server listening on :: port 22.
Feb 13 12:32:46 kali systemd[1]: Started ssh.service - OpenBSD Secure Shell se
rver.
```

No further suspicious activity observed.

System restored to secure state.

## 11. Lessons Learned

- Log monitoring is critical for early detection
- SSH should not be exposed without protection
- Fail2Ban significantly reduces brute-force risk
- Strong authentication mechanisms are necessary

## 12. Preventive Recommendations

1. Enable SSH key-based authentication
2. Disable password authentication
3. Change default SSH port
4. Enable firewall permanently

5. Install Fail2Ban
6. Use strong password policies
7. Regularly monitor logs

### **13. Conclusion**

The simulated SSH brute-force attack was successfully detected, analyzed, contained, and mitigated. Proper log analysis using journalctl, firewall configuration, and system hardening ensured that the system was restored securely.
